DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1,3-6,8-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Specifically claims are not clear for the following reasons:

In all relevant claims the language “capable of being used as “ is indefinite and has no patentable weight.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1,3-6,8-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over EP'818.

See previous office action for specifics of the rejection.

The amendments and remarks filled by applicants have been fully considered. The claims however, remain unpatentable in view of the above rejections.

Applicants have mainly argued that the prior art does not teach the specific steps like measuring the spectral intensity curve, obtaining substances and thicknesses that minimize a color differences. In response the examiner submits that the arguments have not been persuasive. It is well established in the art that steps such as measuring the spectral intensity curve, selecting materials and thicknesses of the layers should be a part of the process of the design for optical multilayered film as well optimizing such parameters to fit desired functions. The steps claimed by applicants would have been obvious to one of ordinary skill in the art.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to leszek b. kiliman whose telephone number is 571-272-1509. The examiner can normally be reached on M-T, 6.30-5.00.
